

# Parmenas Macharia

## Full-Stack Software Engineer

- machariaparmenas22@gmail.com
- Portfolio

### PROFESSIONAL SUMMARY

Full-stack software engineer specializing in enterprise applications, cloud solutions, and business automation. Experienced in designing and building business applications, third-party integrations, and cloud-based solutions across the .NET and JavaScript ecosystems. Skilled in delivering scalable APIs, modern web interfaces, and AI-powered features from concept through deployment.

### EXPERIENCE

Software Developer — Griffin Global Technologies

Mar 2026 – Present

- Design and deliver enterprise software solutions, including transport management systems and business automation platforms.
- Build AI assistant features and integrate cloud services to streamline core business workflows.
- Own features end-to-end, from architecture and implementation through testing and deployment.

Associate Software Developer — Griffin Global Technologies

Oct 2024 – Mar 2026

- Developed and maintained REST APIs and enhanced user interfaces across multiple products.
- Implemented third-party integrations to extend application capabilities.
- Optimized application performance to improve reliability and responsiveness.

Software Developer Intern — Griffin Global Technologies

Jun 2024 – Oct 2024

- Contributed to application development across the software delivery lifecycle.
- Participated in code reviews, testing, and deployment support.

### TECHNICAL SKILLS

|                |                                                                |
|----------------|----------------------------------------------------------------|
| Backend & APIs | C# / .NET, Node.js, REST, PostgreSQL, MongoDB, SQL Server      |
| Frontend & UX  | React, Next.js, TypeScript, Tailwind CSS                       |
| AI & Data      | OpenAI, Azure AI Foundry, Retrieval-Augmented Generation (RAG) |
| Cloud          | Azure                                                          |

### SELECTED PROJECTS

Employee Transport Booking System · .NET, Next.js, SQL Server

Coordinating staff transport through manual scheduling created booking errors, double-allocations, and limited visibility for operations teams. I designed and built an enterprise booking platform with a .NET backend and a Next.js interface backed by SQL Server, giving employees self-service booking and administrators real-time oversight of routes and capacity. The result was a streamlined scheduling workflow that reduced manual coordination, eliminated conflicting bookings, and improved transparency across the transport operation.

AI Knowledge Assistant · Node.js, React, OpenAI, Azure

Staff spent significant time searching scattered documentation to find accurate, up-to-date answers. I developed an AI knowledge assistant using Node.js and React, integrating OpenAI with a retrieval-augmented generation pipeline hosted on Azure so responses were grounded in the organization's own content. The result was faster, more reliable access to institutional knowledge, reducing repetitive support requests and helping teams find answers on demand.

#### **Time Entry Management System** · Angular, .NET, SQL Server

Tracking employee hours across projects was error-prone and difficult to report on. I built a time-entry management system with an Angular frontend, a .NET API, and SQL Server storage, adding structured entry, approval, and reporting features. The result was accurate, auditable time records and simplified administrative reporting that replaced manual, spreadsheet-based tracking.

#### **Data Synchronization Platform** · .NET, SQL Server, Azure Functions

Keeping data consistent across disconnected systems required brittle, manual processes prone to drift. I engineered a cloud-based synchronization platform using .NET and Azure Functions with SQL Server, automating scheduled, serverless data transfers between systems. The result was reliable, hands-off synchronization that improved data integrity and removed the need for manual reconciliation.

#### **Leafpower Solar Solutions** · React, Node.js, PostgreSQL

A growing solar-energy business needed an online presence to showcase its offerings and reach customers. I built and delivered a full-stack web platform using React, Node.js, and PostgreSQL, covering the customer-facing site and its supporting services. The result was a live, production platform ([leafpowersolutions.com](https://leafpowersolutions.com)) that established the company's digital presence and enabled customer engagement.

## **EDUCATION**

---

**Bsc Actuarial Science** — **Dedan Kimathi University of Technology**

2019 – 2024

## **TRAINING & CERTIFICATIONS**

---

- **Software Development Training Program** — Teach2Give, Jan 2024 - April 2024
